💼 WORK EXPERIENCES

SOFTWARE ENGINEER IN PRODUCT

VIETSOFTWARE INTERNATIONAL

`08/2022 - now`

The development team of 16 is focused on building and maintaining an influencer booking and campaign management application using Vue.js and Vuetify UI. Key responsibilities include:

- Collaborating with the product team for design and feature development.
- Creating a real-time chat feature to enhance communication between stakeholders.
- Designing intuitive user interfaces with Vue.js.
- Establishing roles and permissions for influencers, advertisers, and administrators.
- Integrating back-end services and APIs for data retrieval, booking, and management.
- Optimizing for performance and robustness, backed by unit tests and QA collaboration.
- Continually updating with the latest Vue.js practices to improve application quality.

Tools include git, Linux, WebStorm, VSCode, Jira, and Shortcut.

SOFTWARE ENGINEER (ONSITE OF AGILETECH)

VSTech

`01/2022 - 08/2022`

A team of 8 professionals is working on a series of dynamic web and mobile projects that include:

- **Designing and Constructing Layouts**: Crafting appealing and functional interfaces for financial support platforms that resonate with users.
- **Developing Marketing Support Tools**: Utilizing technologies like Laravel and Vue.js to create robust marketing tools to enhance product reach and impact.
- **E-commerce Development**: Collaborating on a specialized e-commerce site for shirt sales, employing cutting-edge technologies like VUEJS (vuecli+toaster) for a seamless shopping experience.
- **Real-Time Communication**: Implementing real-time chat functionality with Socket.io to enable dynamic user interaction.
- **Docker Project Setup**: Leveraging Docker for a consistent and smooth development environment across all projects.
- **API Integration**: Integrating RESTful APIs for seamless frontend and backend interaction, collaborating closely with the backend team on API specifications.
- **Business Analysis**: Participating in business analysis to understand requirements, devise technical strategies, and align solutions with business needs.

Tools being used are git, Linux, WebStorm, VSCode, Jira, and GitLab, and the overarching focus is on constructing user-centric designs and applications that enhance user experience and meet business goals.

SOFTWARE ENGINEER (ONSITE OF AGILETECH)

Vinmec International General Hospital

`11/2021 - 12/2021`

- Join our team of 8 in digitizing healthcare by developing electronic forms in accordance with Ministry of Health guidelines, using Vue CLI to accurately replicate physical forms in a digital environment for digital diagnostics, while continuously enhancing the user interface for optimal usability and simplicity. Manage the state of the project using Vuex, maintaining and managing data from the user interface in an organized and efficient manner. Tailor web interfaces to meet specific customer requirements, striving for an intuitive UI/UX that balances customization with usability to create the best possible user experiences. Tools used include Git, Linux, VS Code, and Trello.

SOFTWARE ENGINEER (ONSITE OF AGILETECH)

Chainos Solution

`06/2021 - 11/2021`

- Join our team of 8 to build the admin page for the backend of our web application using Vue.js and Laravel. Build an interface that is adaptable to all devices and implement Socket.io for user support chat. Utilize Vuex to manage the state of the project and optimize website performance to solve slow loading times and meet standard website requirements. We also prioritize customizing the web according to customer requirements and enhancing the UI/UX for optimal usability. Tools used include Git, Linux, PHPStorm, WebStorm, VS Code, and Jira

DEV

AgileTech

`03/2021 - 12/2021`

- Join our team of 8 to develop CMS products, a shirt sales control website, and a Trello-like feature using Laravel, React Native, and VueJS. We focus on customizing the web as per customer needs and enhancing UI/UX. Engage with Socket.io for real-time chat and Docker for multi-environment development. Responsibilities include responsiveness across devices, language support with i18n, and notifications with Toaster. Opportunity to manage small projects. Tools: Git, Linux, PHPStorm, WebStorm, VS Code, Jira, GitLab.

FRONTEND DEV
IMOBI

`08/2020 - 12/2020`

- Leading a team of 10 in a major digital transformation, responsibilities included converting the company's website from CI4 to React + REST API, refining the interface, optimizing performance, and developing e-commerce platforms. A focus on continuous learning and innovation was maintained, using tools like git, Linux, PhpStorm, and Adobe Photoshop to enhance web experiences and enable growth.

WEB DEV
VEGACORP

`5/2020 - 09/2020`

- As part of a cross-functional team of 8, responsibilities included understanding customer requirements, writing design specifications, performing maintenance on existing sites, and developing new websites. Additionally, the role involved handling multiple projects, resolving cross-browser compatibility issues, engaging in both front-end and back-end development, and using tools like git, Linux, and WebStorm. The position required collaboration, adherence to quality standards, and a multifaceted skillset to deliver client satisfaction.

WEB DEV
DLS inc

`9/2019 - 04/2020`

- Join a team of 10 to develop and maintain back-end website functionality, including subscription & email sending features. Engage in client discussions to perfect the product, write cross-browser compatible code, and manage databases. Specific responsibilities include functions for sales (import/export data), designing email templates, database design for functions/products, store optimization for faster loading, and developing sales websites and small stores using Laravel. Tools used: git, Linux, PhpStorm.

🎓 EDUCATION

WEB DEVELOPER & APP DEVELOPER

Hanoi University of Business and Technology

`09/2015 - 09/2019`

- My journey in IT has always been marked by an insatiable curiosity and an intense drive to learn. I've delved deeply into business analysis and graphic design, recognizing their pivotal role in creating impactful web products. These skills have been sharpened through numerous practical applications, including extensive projects that culminated significant coursework.
- Thinking strategically is a core aspect of my approach to web design. Rather than focusing solely on individual elements, I strive to view each project through a wide-angle lens, considering all its aspects and their interplay to shape a coherent and effective whole.
- Understanding the user is central to my work. I employ rigorous analysis to uncover user needs and behavior, using these insights to design interfaces and experiences that are both engaging and intuitive. This focus on the end-user is bolstered by my proficiency in object-oriented programming, allowing me to build robust and flexible web solutions.
- Technically, I have a firm grasp of the Linux operating system, utilizing its powerful tools and features to enhance my work. Complementing this technical expertise is a broad range of online courses, particularly on Udemy, which provide me with an in-depth understanding of PHP and other programming languages. The result is a holistic, comprehensive skill set that blends business understanding with technical prowess, helping me create web products that truly make a difference.
